1. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
2. Claims 1,2,5 and 6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kishioka, taken either individually, or in view of JP Abst. '781, substantially for reasons of record as most recently set forth in Paragraph No. 5 of Paper No. 20061108, together with the following additional observations. More particularly, with respect to the substance of the various claim 1 amendments it is first noted that the claims are now directed to the double sided psa sheet itself, which the reference(s) each clearly disclose or render obvious. As regards the additions to the independent claim of the limitations of former claim 4 and the additional requirement that "the proportion of the major monomer component.....is 80% by weight or more based upon the whole amount of the monomer components" the Examiner has the following observations. The performance parameter of former claim 4 is simply believed to be a routine optimization of the peeling strength of the adhesive sheet, which is determined by the intended usage of the sheet, which happens to also be one of the intended usages of the references, particularly the primary reference Kishioka. As to the amount of the major monomer the Examiner first notes that not only does the newly added limitation read upon those acrylic polymers containing a (meth)acrylic acid alkyl ester C 1-18 major monomer which does not contain an aromatic ring qualify, as has been previously set forth, but also those major same type monomers which do contain an aromatic ring also qualify, since they are not disqualified by applicants' claim language. Note that although the disclosure of Kishioka and its Examples 1 and 2 is not believed to

specifically state or disclose one single monomer which expressly meets these limitations such monomers in such amounts are well known as being extremely common in these Ulrich Reissue type adhesives. Note also that, e.g. both Examples, have two such major monomers which when added up would clearly meet this limitation, thus lending additional support to the Examiner's argument that such adhesive compositions are well known to one of ordinary skill.

3. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
